

**ShortCuts**  
*Small cut tubing. Big time savings.*

**ShortCuts™** help piping system installers make faster, more economical, and more reliable press connections and configurations. Factory inspected tube is precisely cut, deburred, and machined with unique external FitStop™ grooves. These features combine to save installers time and money by reducing prep time and allowing for quick identification of proper insertion depths with minimum required spacing between joints. ShortCuts™ eliminate this complexity and guesswork by removing the need to measure, cut, sand, and deburr short tube lengths while providing installers with confidence and more uniform press connections.

- ShortCuts™ are bagged for quick and convenient field use
- Unique, rolled FitStop™ grooves allow for uniform insertion depths and more secure joints
- Ends are free of burrs and sharp edges, eliminating the time required for sanding and deburring
- Made in the USA from high-quality Streamline® copper tube
- Eliminates cutting complexity and guesswork while helping reduce excess material waste
- Manufactured to precise lengths for minimum distances between press connections
- Designed for Streamline PRS® press fittings and compatible with solder and other fitting options\*
- An excellent solution for press connections in tight spaces or more complex joint configurations
